vol. 4

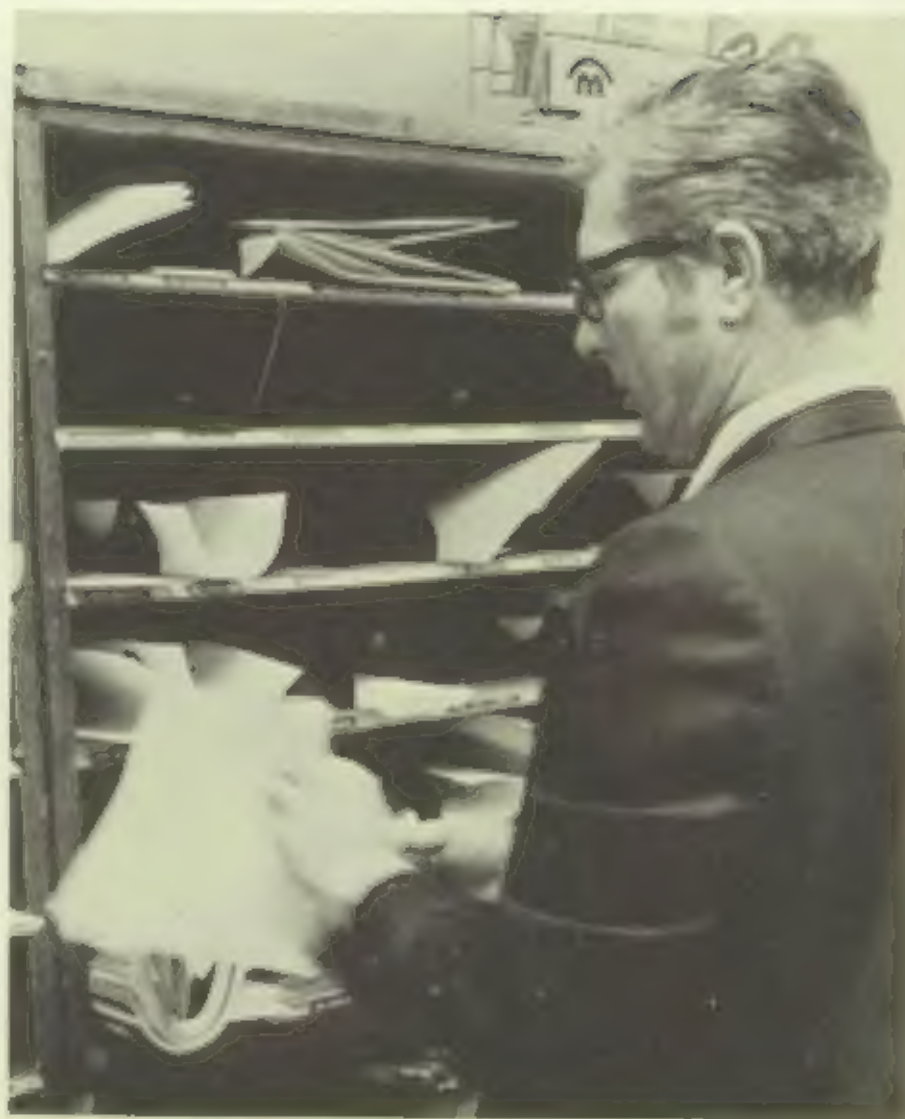

The road is long with many a winding turns
That leads us to who knows where, who knows where
But I'm strong, strong enough to carry him
He ain't heavy . . . he's my brother.

So on we go
His welfare is my concern
No burden is he to bear
We'll get there
And I know he would not incumber me
He ain't heavy . . . he's my brother.

If I'm laden at all
I'm laden with sadness that everyone's
heart isn't filled with the gladness of
love for one another.
It's a long, long road from which there is no
return
While we're on our way to there why not share
And the load doesn't way me down at all
He ain't heavy . . . he's my brother.

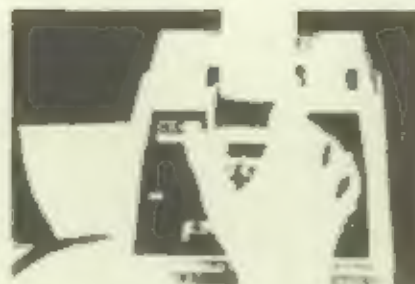

Bob Russell
Bobby Scott

'Tis education forms the common mind:
Just as the twig is bent the tree's inclined.

Pope

Dr. See
Superintendent

Students who are residents of the Penta County Joint Vocational High School District have an opportunity that was unknown here only a few years ago. Through the wise planning of our Boards of Education and the helpful attitude of Ohio's citizens, Penta Vocational High School has become firmly established and nationally respected. During 1971-72 the North Baltimore School District students will be added to the District. In 1972-73, the Elmwood School District will become affiliated. Next year for the first time some students who are residents of our District but who attend parochial high schools part-time will enroll in vocational education classes at Penta. Penta has now become an area vocational high school center available to all of the students fortunate enough to reside within the 2000 square miles comprising the Penta District.

I am proud to be a citizen of the Penta Vocational School District. As superintendent of this multi-county district, I wish to commend the students and staff who planned and prepared the 1971 Artisan for posterity

Jacob H. See
Superintendent

BOARD of education

Bottom row Mr. Catalano, Mrs. Tucker
Mr. Butler, Mr. Roth. Top row Mr. Britton,
Mr. Woods, Mr. Emch, Mr. Kurfess, Mr.
Akenberger

Appointed in January: Mr. Stevens, Mr.
Rossler

Not pictured. Mr. Ellis,
Mr. Nehls

Mr. Kingsley
Director

Each year Penta County Vocational High School enlarges its sphere of influence. During the 1970-71 school year more students than ever before participated in the vocational programs offered at Penta. We are proud of the character of the students who chose to pursue skill training at Penta just as are the home high schools in which students also hold membership. Penta will continue to provide the kind of education and leadership in vocational education which the Penta Vocational District deserves.

Each young man and young woman who has attended

Penta and goes out into the community to take a position serves as an ambassador or representative of Penta as well as their home high school. We wish to extend our best wishes to each student who has completed his program here and will be assuming greater responsibilities in the way of a job or further education.

Leonard Kingsley
Director

Seldom does one have an opportunity to express appreciation to both student body and staff for their contribution in completing another successful year.

To the student, society's challenge of utilizing newly acquired skills and talents is just beginning.

The reward to staff is your acceptance of this new challenge and the fulfillment of your role in accepting the responsibilities in the world of work.

Penta is recognized as an outstanding institution preparing young men and women for their chosen vocation and it is my hope that each student is prepared to meet the challenges and reap the rewards of his/her vocational training.

academic

An English Department in a vocational high school can establish relatively definite goals, because it is recognized that the vocational students are already in the process of selecting their life's occupation. However, rapid advancement in modern technology changes the skills required in a vocation so much that a vocational school graduate may need further education and training or may need to be re-trained to become employable in his vocation. Therefore, vocational students need a fundamental knowledge of English that no future doors will be closed to them in meeting entrance requirements for further education. Modern technology has also decreased the number of working hours in a week; more leisure time is available even to the skilled tradesman. Reading for pleasure and discriminating television and movie viewing should therefore be a part of the English curriculum. The philosophy, then, of the English Department at Penta County is eclectic. On the one hand every attempt must be made to gear the content of the English course to the definite needs and goals of the student in his vocation. On the other hand, a sound, basic course in literature, grammar, and composition should meet the standards set in a comprehensive high school

The Social Studies Department of Penta County will contribute a great deal to the growth and development of its students because the basic purpose of the social studies is identical with the general purpose of education, i.e., the development of democratic citizenship. The attainment of democratic ideals and practices starts with the student at home, continues in church, and carries over into the classroom. Only by producing trained citizens, who are socially intelligent, can a successful democracy be continued and improved. It is the collective aim of the Penta County Social Studies Department to assist our students in developing wholesome political, moral, cultural, social, and economic values that are consistent with, and predicated on these principles of a free society, so that they may intelligently pass on their inheritance

Vocational Horticulture is a study of basic surface soil abilities and plant life grown in that soil. It deals mainly with the study of soils, plants, propagation, turf grasses, identification of plants, landscape, design, floral arranging, insect and disease control of ornamentals, and proper operation, maintenance and repair of horticultural equipment and tools. Instruction also includes a study of plant processes and functions as they are applied to greenhouse and other horticultural applications. All of the above involve the student in gaining skills and competencies and in cooperative work placement as an option to the student between the junior and senior year during the summer months.

AGRICULTURE

This program is provided for high school junior and senior students interested in occupations relating to the manufacture, sales, and maintenance of agricultural equipment. Students are provided with experience that will help them understand the mechanical operations and capabilities of agricultural equipment and learn the appropriate methods and procedures for the care, service and sales of various equipment and machinery.

The account clerk business and office education program is provided for boys and girls interested in occupations related to bookkeeping and accounting. Classroom instruction and practice focus on developing the skills and understandings needed to keep records on fiscal affairs such as accounts payable, accounts receivable, profits and loss statements, reports and balance sheets, preparing payrolls, and handling bank deposits and withdrawals. Students completing the program usually find employment in banks, insurance companies, offices and various stores, businesses and industries or use the technical background in accounting as preparation for a college in certain fields of business and office education. They will develop skill in typing, statistical typing, calculating machines and adding machines. Fundamentals of English and arithmetic, and instructions in related office techniques and procedures are learned.

BUSINESS

This two-year program is designed to give students a basic understanding of the business application of computers and to develop competencies in this area. The purposes of this course are to acquaint the students with the data processing concepts and they serve as an introduction to electronic digital computers. The operation of unit record equipment is learned. Symbolic language (language for the computers) is used to program exercises for the computer. Students will operate data processing machines, set machines to perform operations desired, feed in punch cards or tapes, watch for errors, pass data to the next machines in the system and wire control panels.

The two-year Stenographer-Secretary business education major is provided for high school junior and senior students interested in acquiring the training in high school that will enable them to work as stenographers or secretaries in business offices, legal firms, banks, insurance companies, doctor's offices and various governmental and industrial offices. Students in this program will receive over twenty hours per week of instruction and related work in such courses as Shorthand, Typing, Filing, Business Law, Office Machines, Economic and Office Management.

This is a two-year program designed to give students with occupational goals in business and special interest in working with office machines an opportunity to develop the skills and understandings needed for work with office duplicating materials for business and to develop skills in the operation of various machines. The course includes setting up, operating and maintaining equipment, composing equipment, such as the Headliner, VariTyper, selectric typewriters, making masters for photo direct camera and plate buring equipment, and duplicating on offset duplicator machines. Students also learn auxiliary functions such as cutting, punching, stapling and collating. They also learn the adding maching—full key, ten key, printing calculators, rotary calcualtors and transcribing machines

education

Cooperative Office Education (COE) is a terminal program in business education provided for individuals who have previously completed part of the course work toward a stenography, bookkeeping or clerical business education major and who are presently interested in participating in supervised part-time office employment as a means of making the transition from the school business program into full-time employment at graduation. At the beginning of the COE program each student will make application for employment, have employment interviews and obtain a job in one of the cooperating local businesses. The student's work experience will be supervised by the teacher-coordinator and the in-school COE classroom instruction will focus on the information and skills needed by class members at their various places of employment.

The term "Distributive Education" identifies a program for seniors with the purpose of providing instruction and closely supervised work experience in marketing and distribution. Students work closely with their Distributive Education (D.E.) teacher-coordinator both in class and in carefully planned and supervised half-day experience employment. Related classroom work includes two periods daily for study of the principles of business operation—store, location, organization, personnel, maintenance, merchandising, advertising and selling; product information—materials, manufacturing, care, selling price, price lines and consumer benefits; and salesmanship—customer identification, sales training, sales personality, merchandising knowledge, sales approach, sales techniques, sales systems, commissions and selling as a career.

DISTRIBUTIVE education

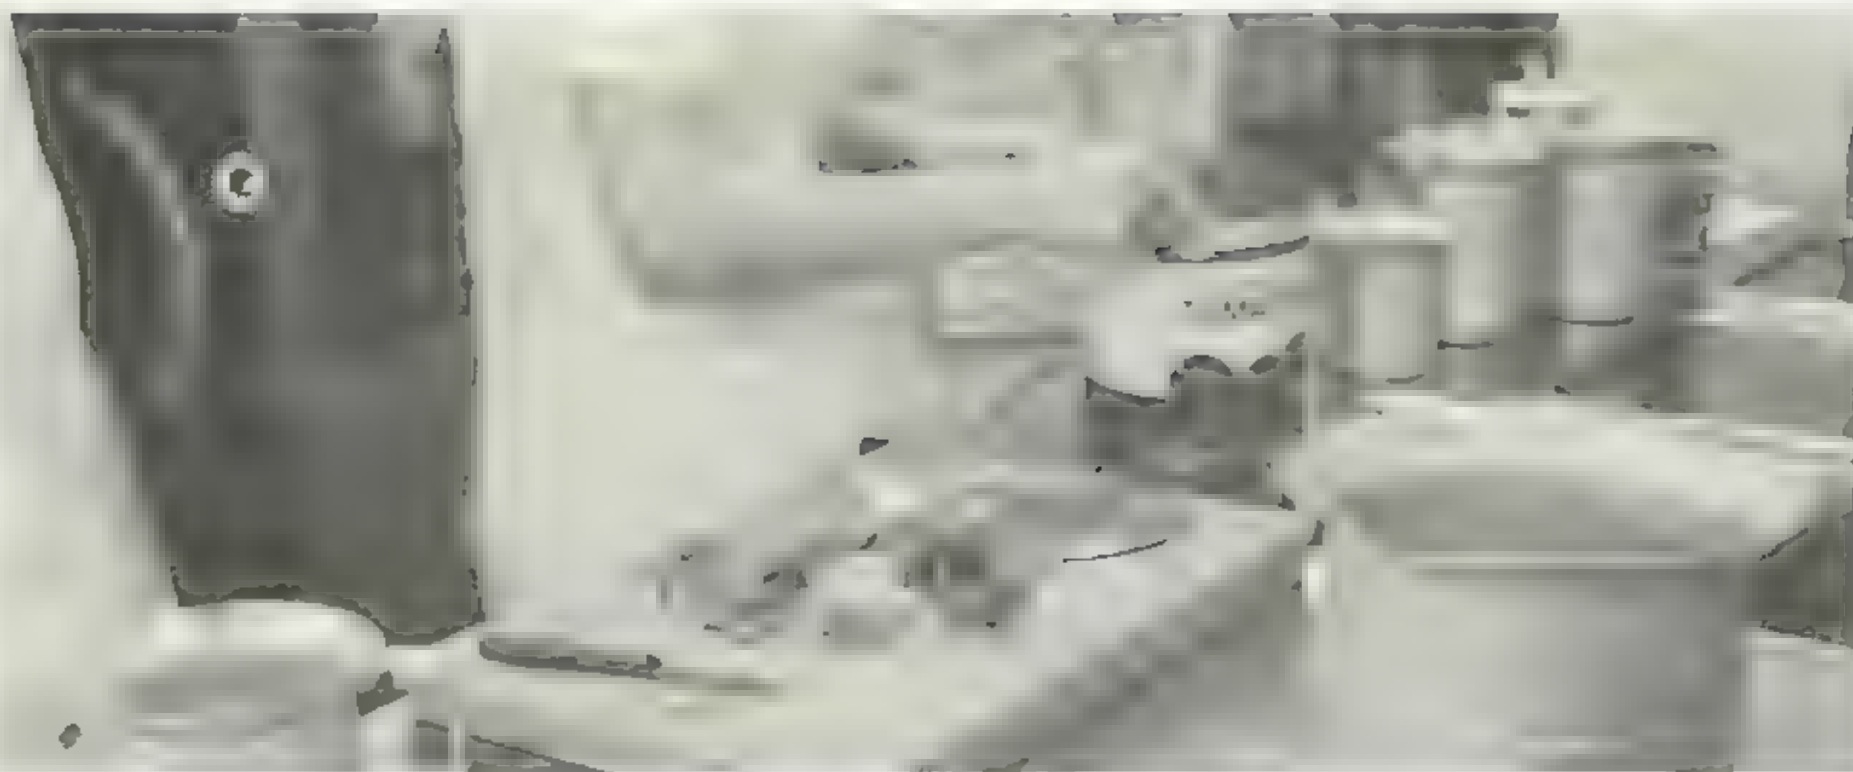

home economics

The Child Care Aide program is a one-year program for either junior or senior girls. The course content is similar to the first year of the Child Care Assistant program. It is recommended that students take Community and Home Service in the junior year, the Child Care Aide program in the senior year. Some of the objectives of the Child Care Aide program are to (1) help children accept nursery school and participate in suitable activities; (2) help supervise children in their play, eating, resting and toileting; (3) help children get into and out of outer garments and put them in designated places; (4) help keep day care center clean and attractive; (5) practice and teach the children accident prevention.

The Child Care Assistant course is a two-year program. The first year the student spends two class periods studying the growth and development of the children, human relations, foods for children, and effective management practices of a nursery school program. Four laboratory periods daily will be spent in a nursery school observing and perfecting the skills necessary to care for the young children. Students assist a professional nursery school teacher as they work in the Penta Nursery School. Second year students will work one-half day in day care centers, public nursery schools, Head Start programs and schools for exceptional children, Kindergartens, recreation centers and children's homes. Graduates may seek employment in these types of preschool centers.

The Community and Home Service program is a one-year program preparing students to work in hospitals, nursing homes, hotels, motels and private homes, where life in a clean, orderly and pleasant atmosphere is desired. The program offers one semester of home nursing and one semester of the housekeeping skills used in hospitals, rest homes and nursing homes, hotels and motels. Students study various housekeeping and laundry practices, home nursing skills, preparations and service of meals, and food preparation of special diets ordered for patients

The Dietary Aide Program is designed to train both boys and girls in the field of food service. This program covers food preparation and food storage and handling in addition to the operation and care of machines and equipment used in restaurant kitchens. The course is devoted to quantity cooking, purchasing food in quantity, planning menus, estimating food cost, serving food, nutritional quality of food, safety, and sanitation when handling food

The Institutional Aide program is a one year program open to girls. Nine weeks are spent learning waitress work. Another nine weeks are devoted to learning skills needed in the dry cleaning establishments. An additional nine weeks are spent learning basic institutional housekeeping skills. During the year students are given the opportunity to utilize skills they have learned and are interested in developing in the various departments in the school. The seniors are placed on a job the last nine weeks of the school year and offered the opportunity to work out any employee adjustment problems while still in school.

This two-year program is devoted to developing concepts, understandings and skills used in repairing and refinishing damaged automobile bodies. The training starts with buffing, waxing, and interior cleaning. Parts replacement and adjustment is taught with emphasis on proper use of hand tools and fasteners. Welding, painting, soldering and minor straightening are performed in the junior year. The seniors work primarily on collision repair, including replacement of welded panels, frame and body straightening. Materials and methods, science, physics, and math as they relate to the trade are covered in class. Estimating procedures are covered as a part of senior classroom work

This two-year program beginning in the junior year, is devoted to developing auto mechanics skillful in the maintenance and repair of automobiles. A minimum of three hours daily is spent in the shop working on automobiles or their component parts. In addition to the three hours of skill development, auto mechanics programs include an additional one and a half hours in classes designed to develop concepts, understandings and skills in shop mathematics, science, automotive service manual use, automotive electricity, sketching and reading diagrams. Developing proper working attitudes is an important objective of the course

SENIORS

There was set before me a mighty hill,
And the long days I climbed
Through regions of snow,
When I had before me the summit view,
It seemed that my labor
Had been to see gardens
Lying at impossible distances

This two-year program beginning in the junior year is designed to provide the experiences necessary for the development of concepts, understandings, and skills required of carpenters in building construction. A minimum of three hours each day will be spent in the shop in skill development and an additional one and a half hours each day will be devoted to concepts and understandings necessary for carpenters. Both shop and class experiences will include such topics as: operation and care of carpenter's hand and power tools; framing of buildings; interior and exterior finishing; sketching and drawing; reading and interpreting plans, specifications, and blueprints; form building; building materials, their characteristics and uses; as well as estimating and cost accounting for carpenters.

trade and industrial education, cont.

This is a two-year program in which emphasis is given to increasing proficiency in basic art skills and advertising layout is introduced. Increasingly complex and varied problems in layout idea interpretation, and art presentation provide for development of skills in layout work, paste-up, touch-up, illustration, and other graphic techniques. There is specific training in perspective: life and still life; drawing; lettering, Roman, Gothic, and script type; key lining; layout, advertisements, brochures, letterheads, and menus; illustration, line, black and white, color; mechanical illustrations, hand and air brush renderings; fashion illustration, newspaper and magazines, cartooning; graphic reproductive processes and art history.

This one year program is designated to provide the student with the proper background fundamentals concerning the cement trades can expect to find a wide variety of employment opportunities in a challenging and growing industry. The cement trades curriculum is set up so that qualified personnel could expect to find employment in construction, technical service, sales, inspection, and quality control. The program covers the following areas: construction surveying, estimating, Portland cement—history, manufacturing and testing, aggregates for concrete, proper tools for placing and finishing concrete, structural concrete requirements, architectural concrete techniques, related mathematics, general construction techniques and maintenance procedures.

This two-year program is begun in the junior year. A minimum of three hours each day is spent in the lab in supervised work on fellow students and, later in the program, on customers. An additional two hours each day is devoted to concepts and understandings from such fields as bacteriology, anatomy, physiology, business management as well as trade information and current trends in styling and hair care. The course includes shampooing, cold waving, tinting, bleaching, hair cutting, shaping, rinses, manicuring, facials and styling. In addition, training is offered in equipment sterilization and sanitation. Proper procedures in shop operation and management are also stressed. In the theory portion is electricity, light therapy and cosmetic chemistry.

This program is a two-year course. Graphic Communications is a highly skilled trade, with good employment and advancement opportunities. Steady employment can be found in many small print shops, magazine publishing companies, greeting card companies and the like. In addition much printing is done by individual corporations for their own use and they run their own printing departments. Large corporations are waiting for graduates in this trade in the Toledo area. Offset printing and folding equipment and other automatic printing machines are owned by many corporations for their own use.

This is a two-year program designed to train the student to perform the duties of the dentist's assistant at chair-side, reception and laboratory.

Instructional materials covered in the two-year program include dental science, anatomy, pathology, bacteriology, actual laboratory techniques, x-ray procedures, care of dental instruments, office management, and chair-side assisting. Students who are considering this area of study should have had as much science as possible in the ninth and tenth grades. Specifically, general science, biology, chemistry, and physics if they are offered the first two years. Typing is also strongly recommended as is bookkeeping.

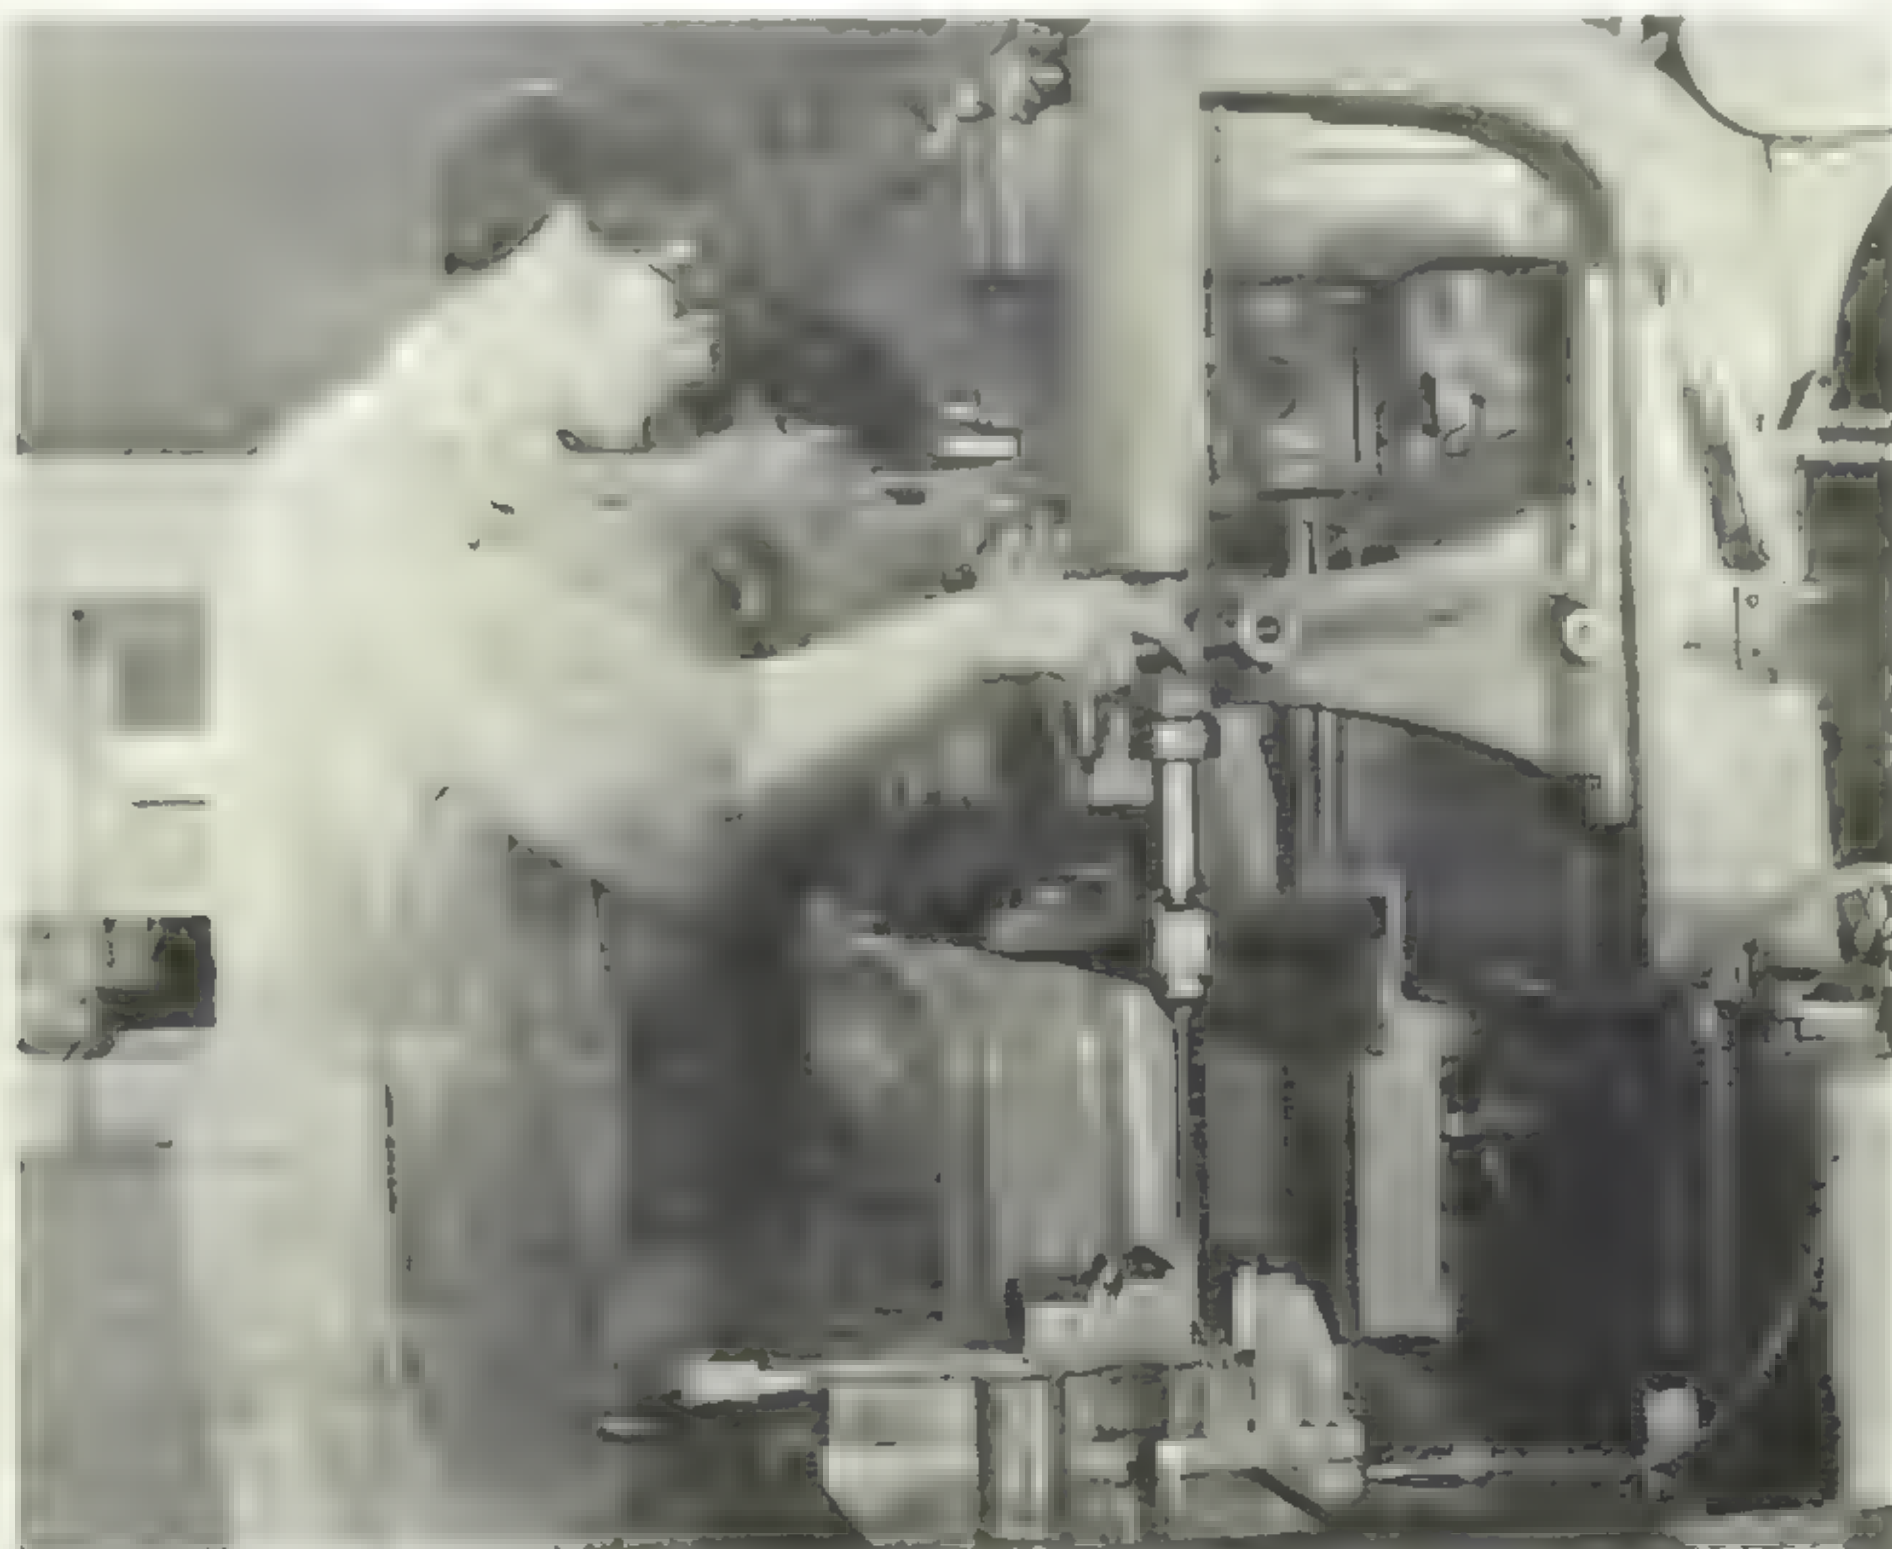

The student who graduates from this two-year program in Electronics will have gained skills and knowledge in physical sciences, academic mathematics and theories of electricity, plus an understanding of electronic circuits, tubes transistors and the principles of heat and magnetism. He will also become competent in the use of electronic test equipment. Telecommunications, radar systems maintenance men, computer technicians, radio-TV technicians and research and development technicians are some of the more exciting but specialized careers with electronic orientations

The drafting course offers training in mechanical drawing techniques as used in modern day practice. The junior program is designed to give a good basic knowledge of Industrial Drawing and an exposure of industrial methods and processes. The senior program continues and goes into much greater depth in these areas, as well as offering an orientation to materials and techniques that are currently part of industry and construction. Emphasis is made on the future growth of the engineer and draftsman in our society.

Machine Trades is a two-year program designed to prepare the student for entry occupations in work involving machine trade work on the basic machines. This program not only offers its graduate unlimited opportunities for occupations but also proves invaluable training for apprenticeship programs. This program offers instruction in shop, math, blueprint reading, instruments used by the machinist, metals and their characteristics and shop safety. Laboratory experiences include learning the set-up and operation of basic machines: lathes, grinders, milling machines, screw machines, etc.; filing, hand tapping, dowel fitting and other hand operations.

This is a two-year program leading to a career as a Radio and T.V. Serviceman. The program is open to juniors and it requires a minimum of three hours daily of laboratory work plus an additional hour and a half of study in a class devoted to aspects of radio and T.V. servicing. This program offers basic training in the fundamentals of electronics which are applied to the field of Radio and T.V. and many other associated areas. The major items covered in this course are: AD-DC circuits, vacuum tubes and circuits, transistors and transistor circuits, AM and FM radio circuits, AM and FM basic transmitters, TV transmission systems, black and white TV receivers, TV analyzing, color TV fundamentals, color TV circuits, color TV analyzing, antenna systems.

Welding is a two-year program designed to prepare the student as an industrial welder who possesses skill and knowledge in nearly all welding occupations. This program offers technical and manipulative instruction with supervised practice in oxyacetylene welding, all positions; electric arc welding; all positions; metal inert gas welding; tungsten inert gas welding; arc cutting and gouging. This program is designed to train students in developing sufficient skill to successfully perform welding processes with proficiency, in reading blueprints and welding symbols, to develop safe and desirable working habits

The Occupational Work Experience Program is a one or two year program open to both boys and girls. This program consists of a student spending one-half day with in-school instruction aimed at job adjustment and experience, along with assisting the student in regular Academic subjects. The other half day is spent with on-the-job work experience. Work stations are located in local business and industries in the area. The Occupational Work Experience instructor works closely with the student, the parents and employer in coordinating and evaluating the training and experience on the job, along with the development of good citizenship. This combination of achievement will help students develop feelings of accomplishment and success.

***MOTTO: PREPARING FOR LEADERSHIP
IN THE WORLD OF WORK***

The book is completed,
And closed, like the day;
And the hand that has written it
Lays it away

Longfellow

autographs

Grandpa,
We thank you for putting
up with all of us this year.
You're the best un-jammer
I ever saw. Good Luck in
your many more happy years
of teaching
Nancy Marik

Grandpa,
Thanks for being so
kind, most teachers
don't care for this
I thank you
for Gordon

Grandpa,
I'm glad you're
still here. I hope
you'll stay with us
for a long time.
I love you very much.
Your granddaughter,
Nancy Marik

Grandpa:
We finally got the
year over with - the super '71 -
the candy sale & all our surprise
party actions! Thanks for letting
me make my IOE posters in class -
even if I did get sick! You always
got us on the flight route to get
home - but no more Toledo
one-way streets for a job interview -
please tell Barb that --- 2 more
things - remember my eggs &
Santa - Iake care & have as
much fun on next year's field
trips as we had.

Jenna Meyerholz
Oak Harbor High
